Projects

RPGtheGame | rpgthegame.herokuapp.com | github.com/JosephFAnderson/RPG_the_Game
- A game where users create characters to battle monsters in order to level up and get new gear.
- Created a REST API utilizing the Express.js library.
- Used a relational database to store user and game data with MySQL and Sequelize library
- Implemented a single page application using Handlebars.js library
- Developed logic for a simple combat function with javascript

Masterscrolls | masterscrolls.herokuapp.com | github.com/JosephFAnderson/masterScrolls
- A tool for tabletop rpg game masters to help with campaign organization. Allowing creation of non player characters and grouping by the location they are from in game.
- Created API routes with GraphQL
- Implemented a single page application utilizing React library
- Limited database queries by implementing global and local state management
- User and Campaign data stored with MongoDB, and crud operations created using Mongoose library

Experience

Wasteland Gaming LLC   Duluth, GA
Retail Manager   Jan 2014 - May 2022
- Created an organizational system to better delineate front of house stock from e-commerce stock which lead to higher efficiency fulfilling orders
- Analyzed sales data to inform owners of slow moving products, which lead to increased product turnover
- Efficiently organized and ran events with upwards of 250 participants, causing to repeated selection of the company to host more events
